DETAILED ACTION

1. Applicant's arguments, filed 03/24/05 with respect to have been fully considered and are persuasive. The rejection in view of Pastrick '654 and claim objections have been has been withdrawn.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-22, 25-32 and 35-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Henion et al '465 or '192 (particularly figures 21-24) discloses a mirror housing 250 having an upper wall portion, a lower wall portion. a forwardly facing wall portion, an inner wall portion and an outer wall portion; adapted to be secured to an outer surface of a motor vehicle and having a generally rearwardly facing opening. A reflective element is disposed within the opening. A modular bezel 252 is connected to a lower traverse surface of the housing, the modular bezel having an opening for projecting light and a holder 150 positioned in the modular bezel. A light transmitting lens (262 and 264) formed in the modular bezel 252. A modular bezel formed as a separate element and attached to said lower wall portion wherein said modular bezel is positioned entirely below said reflective element. The modular bezel having a light source assembly 272 located and connected to the holder (see column 9, lines 24-26)

inside the modular bezel 252 having a light source 272 connectable to the light source assembly wherein the light source generates light. The light source assembly generating light projected through the opening in the modular bezel. The light source assembly being operable to provide a light signal visible through the light transmitting lens. The opening in the bezel 252 projects rearwardly. The light source 272 generates light to provide at least one of a turn signal light, an approach light, and a vehicle side marker light. The light source assembly 138 has a reflective inner surface being shaped to direct a maximum amount of light emitted from the light source 272 to the lens (262 and 264). The lens (262 and 264) is operative to direct light through an arc extending at least 40 degrees. The light source is operable to provide a signal visible through the light transmitting lens 154 to a rearward motor vehicle when activated. The light source 272 generates light to provide a vehicle approach light and wherein the lens of one of red, amber, and white. The light source 272 generates light to provide a vehicle side marker light and wherein the lens is one of red, amber, and white.

Response to Arguments

Applicant's arguments with respect to claims 1-15, 17-22, 24-25, 27-32 and 34-40 have been considered but are moot in view of the somewhat new ground(s) of rejection.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Henion '189, Armbruster and Miller '109 and '689 teach illuminated mirror assemblies which are similar to applicant's invention..
